-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 03 June 2002 and 31 July 2002.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-21 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-18 and 21 is/are rejected.
- 7) ☒ Claim(s) 19 and 20 is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☒ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☒ All b) ☐ Some * c) ☐ None of:
1. ☒ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☐ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 6.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

Art Unit: 1752

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-18 and 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Brust et al (6,100,019) in view of Nisikawa et al (6,007,977).

Brust et al disclose a silver halide photographic material comprising high bromide {111} tabular grains having a high chloride epitaxy. The grains are preferably silver iodochlorobromide and contain silver iodide in an amount of less than 10 mole %, and silver chloride in an amount of less than 10 % as well (column 3, line 53 to column 4, line 35). It would have been obvious to one of ordinary skill in the art to prepare the emulsion using any amount within these ranges. Additionally, the inventive grains comprise either 0.75 mol % or 1.2 mol % iodide. The epitaxial deposits may constitute only 0.1 % of the total silver, thus the chloride may be added in an amount as low as 0.1 mol %. The grains account for at least 90 %, most preferably greater than 97 % of the total grain projected area, have a thickness of less than 0.2 microns, preferably less than 0.07 microns, an ECD of less than 6 microns, and an aspect ratio of at least 5 (column 5, lines 30-57). The grains may be hexagonal (column 7, lines 34-50). The grains contain high chloride epitaxies in the corners of the grains. The examples prepare grains having 6 epitaxial deposits, one in each corner of the grain, which implies that the grains formed by the examples are hexagonal grains. The pBr during emulsion preparation is preferably adjusted to be between 3.0 and 3.8, after the temperature has been set between 20 and 60 degrees C, and from looking at

Art Unit: 1752

the inventive examples the temperature is preferably 40 degrees C (column 6, lines 45-67). The exemplified grains also contain one or more dislocation lines at the epitaxial junctions, demonstrating that the grains may have dislocation lines at the apexes of the grains. The material comprising the emulsion is coated on a support (column 10, lines 15-18).

Although the material does not specifically refer to the COV of the ECD of the grains, since the reference teaches that the emulsion should be monodisperse, that the COV would inherently be very low and would be less than less than the 30% and 20 % claimed given that it is most preferable for greater than 97 % of the emulsion to be comprised of the preferred grains which would have an ECD within the claimed range. The reference fails to disclose specific information on the edge lengths of the hexagonal grains.

Nishikawa et al disclose a silver chloriodobromide {111} emulsion comprising hexagonal grains containing dislocation lines in the apexes of the grains (column 4, lines 1-46). The reference teaches that it is preferable for hexagonal grains to have a ratio of the longest side to the shortest side of 2 or less (column 3, lines 11-26), and further teaches that a monodisperse emulsion will have a low COV of the ECD (15.5 or less) of the grains.

It would have been obvious to one of ordinary skill in the art to prepare the monodisperse high bromide {111} hexagonal grain emulsion of Brust et al using hexagonal grains having a ratio of the longest side to the shortest side of 2 or less given that it is taught to be preferable by Maruyama et al with reasonable expectation of achieving an emulsion having high sensitivity and graininess.

Art Unit: 1752

Allowable Subject Matter

1. Claims 19 and 20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art of record fails to teach or suggest to one of ordinary skill in the art to prepare the material of the present claim 1 or 2 wherein the pBr of the emulsion is at 40 °C is not more than 3.5.

Response to Arguments

2. Applicant's arguments filed 6/3/2002 and 7/31/2002 have been fully considered but they are not persuasive.

Applicant has argued that the Brust reference fails to teach all the parts of the present claim 1. Specifically, applicant has argued that the reference fails to teach that the hexagonal grains contain an epitaxial deposit in each of the 6 apexes of the grains. Although the example demonstrates that 69 % of the total grain projected area meets these requirements, the reference further states that *about* 70% of the total tabular grain population exhibited 6 epitaxial deposits, meaning that the percentage could be slightly more or less than 70 % and meaning that 70 % is the apparent target percentage (column 14, lines 20-25). This meets the present claim limitations.

Applicant has argued that the Nishikawa et al reference fails to disclose hexagonal grains meeting all of the parts of the present claim 1. The Nishikawa reference is cited solely for its teaching that hexagonal grains will preferably to have a ratio of the longest side to the shortest side of 2 or less, not for its teaching of the specific hexagonal grains claimed by the present claim 1.

Art Unit: 1752

The applicant has also argued that the method of forming the grains and depositing the epitaxies of the present specification achieves superior results. The examiner would like to point out that the present claims are drawn to a silver halide photographic emulsion (with one claim drawn to a material) and there are no method claims present. Thus, the fact that superior results *may be* obtained by using the method of the present invention (adding a fine grain iodide emulsion instead of KI and varying the addition time) is not a persuasive argument as all that matters is the final product in this instance, and the grains/ emulsion of Brust do meet the present claim limitations. Additionally, in the tables applicant has cited in the present application, applicant is comparing an emulsion having 40 % of the total grains being the perfect hexagonal grains with an inventive emulsion having 70% of the total grains being perfect hexagonal grains. Applicant is not comparing the inventive emulsions to the closest prior art which, according to Brust, is an emulsion as discussed above.

The examiner has reconsidered her position with respect to the pBr, and the applicant is correct in that the pBr discussed by the reference is not the pBr of the final emulsion, but in the reaction vessel during precipitation. In light of this, the rejections of claims 19 and 20 have been dropped.

Conclusion

3. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO**

Art Unit: 1752

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Amanda C Walke whose telephone number is 703-305-0407. The examiner can normally be reached on M-R 5:30-4.

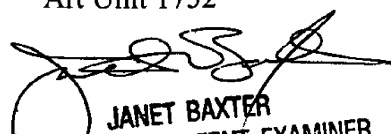

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Janet Baxter can be reached on 703-308-2303. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9310 for regular communications and 703-872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0661.
